Green Energy Resources (M) Sdn. Bhd. (GER), a wholly owned subsidiary of GPP Resources Berhad, has been an established EPCC provider of renewable energy solutions since 2008. The company specializes in alternative fuels such as natural gas, biogas, and syngas, applying them in reciprocating engines for power generation. With rising fuel costs, GER promotes biomethane from agricultural waste and palm oil-based biodiesel as cost-effective, environmentally friendly alternatives to diesel, aiming to capture a significant share of the Asian energy market. Supported by well-trained technical staff, GER offers electrical, instrumentation, and control setup, maintenance, and troubleshooting, along with flexible arrangements such as equipment sales or build-own-operate-transfer models. As a SEDA-approved local engine assembler, GER provides clients with higher Feed-in Tariff (F.I.T.) incentives, strong after-sales support, and timely spare parts availability. Its products and services include biogas and syngas production solutions, gaseous fuel power plants, gasification of cellulose and organics, engine calibration and upgrading, and comprehensive biogas operation and maintenance services.
